## Oil & Lubricants

### Gasket Lubricator

This is the best way to lubricant any type of gasket with a silicon lubricant. Loaded with enough silicon 747 grease to lubricant hundreds of gaskets. Simply place the gaskets inside and give a 1/2 turn of the lid, with very light pressure and you are done. When dry just add a little more silicone 747, which you can purchase below.

**FB-900****\$6.95**[order](#)[checkout](#)

### KT-22 Stem Lube

An all purpose stem and waterproof crown lubricant. Another great American made product, which is more than worth a try.

**FB-901****\$3.50**

[order](#)[checkout](#)

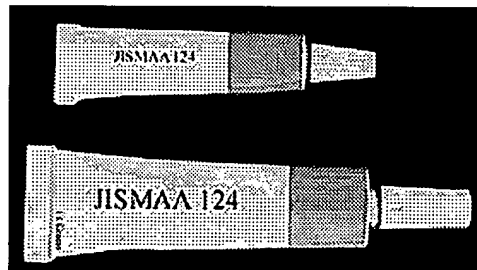

### 747 Silicone Lubricant

Like the other silicon greases this is a good, very high temperature lubricant and is available in a syringe. The syringe can be useful for certain applications.

**FB-902****\$5.95**[order](#)[checkout](#)

### PML Stem Grease W-10

This is an American product, which just might be superior to any European product for stem and winding parts. Since this is an American product ETA will not be found endorsing it, however American watchmakers know that PML stem grease is hard to beat!

**FB-932****\$3.90**[order](#)[checkout](#)

### Jismaa 124 Lubricant Large

Special synthetic mineral lubricant which is recommended by Ebauches SA and the Swiss Horological Research Laboratory. Excellent quality suitable for high friction over wide temperature range, -50 to 100C, on copper alloy parts in today high grade Quartz Watches.

**173.190**

**\$49.50**

**Novostar Oil "M"****\$6.95**

Novostar type "M", for Pallet Stones, Escape Wheels on Pocket Watch and Alarm Clocks.

[order](#)[checkout](#)**Novostar Winding Grease****\$6.95**

COL-2025

Grease for all winding parts, stems, clutch and crown wheels.

[order](#)[checkout](#)

**Novostar Barrel Grease****\$6.95**

For Watches and Small Clocks

[order](#)[checkout](#)**LA PERLE WATCH OIL 10CC****\$5.85**

OL-42350

[order](#)[checkout](#)**Fomblin Grease**

A white homogeneous grease for lubrication of mechanical parts used in temperature range -30 degree to +150 degree celcius. Specially developed for parts subject to friction of medium pressure when mineral and standard synthetic lubricants break down due to temperature changes and exposure to the air. Also useful of greasing all types of joints as well as special optical and micro mechanical equipment.

**FB-960**

**\$42.00**
